

DOME CO

SHELTER FOR AN AQUAPONICS SYSTEM

GROW YOUR OWN FOOD WITH THE AQUAPONIC GREENHOUSE

The shelter allows you to grown your own food outside no matter the weather conditions. It has four windows, three automatic and one on the top that is always open. It's made of organic materials to keep it as much sustainable as possible.

Weather resistant

Made of pinewood and covered with PC panels to ensure a good insolation of the outside conditions, like storms, heat, cold, etc

Modular design

It is a modular design, that means it is easy to build and if some piece breaks it is possible to change only that piece not all the shelter.

Working autonomously

It automatically creates the conditions to fit with the needs of the aquaponics system, so it makes it easier to have your own garden and cultivate organic food.
